PROFILE

Senior Software Engineer specializing in **React, Next.js, TypeScript, and Node.js**, with experience building and scaling production SaaS applications across fast-paced startup and product environments. Strong background in full-stack development, frontend architecture, API development, performance optimization, and scalable application design. Experienced in owning features end-to-end, translating evolving product requirements into production-ready solutions, and delivering high-quality software through close collaboration with product, design, and engineering teams.

EMPLOYMENT HISTORY

Feb 2026 — Aug 2026	Senior Fullstack Software Engineer, Eluvium London - Built and evolved a full-stack B2B SaaS platform in a fast-paced startup environment using Next.js, React, TypeScript, Node.js, PostgreSQL, and Prisma. - Owned and delivered end-to-end product features on a weekly release cycle, from technical design and implementation through testing and production deployment. - Designed scalable APIs, real-time functionality, background workflows, and role-based access control (RBAC) for a multi-tenant application. - Integrated Inngest for background job orchestration and PostHog for product analytics and monitoring. - Collaborated directly with product and engineering teams to turn rapidly evolving business requirements into maintainable, production-ready solutions. - Improved application architecture, performance, reliability, and security while continuously shipping new product capabilities. Tech Stack: TypeScript, React, Next.js, Node.js, PostgreSQL, Prisma, Inngest, PostHog
Mar 2024 — Sep 2025	Senior Frontend Engineer, Career.io New York - Developed and maintained scalable frontend applications using React, Next.js, TypeScript, and Redux across Career.io's core products. - Delivered 30+ product features and 5+ AI-powered capabilities, collaborating with product and design teams from concept through production. - Architected and built 2 large-scale services, expanding platform capabilities and supporting long-term scalability. - Led major frontend library and dependency upgrades, modernizing shared architecture while improving application stability and maintainability. - Improved frontend performance, accessibility, code quality, and testing practices to deliver reliable and inclusive user experiences. - Diagnosed complex production issues, reduced technical debt, and contributed to technical planning and architectural decisions. Tech Stack: TypeScript, JavaScript, React, Next.js, Redux
Apr 2022 — Jun 2023	Senior Software Engineer, Mintus London - Developed and maintained core frontend functionality for a FinTech platform using React, Next.js, Redux, and JavaScript. - Translated complex product and design requirements into responsive, maintainable, and production-ready user interfaces. - Integrated and maintained third-party services, ensuring reliable communication between external systems and the application. - Improved application quality through reusable components, frontend best practices, accessibility standards, testing, and systematic debugging. - Collaborated with product, design, and engineering teams throughout Agile development cycles, contributing to technical planning and reliable feature delivery. Tech Stack: React, Next.js, Redux, TypeScript

Oct 2020 — Apr 2022	Senior Software Engineer, Teknoser	Istanbul
	- Designed and built an internal full-stack application from the ground up, taking ownership across architecture, frontend, backend, testing, and deployment. - Developed responsive frontend functionality using React and implemented backend services and business logic using .NET. - Translated internal business requirements into scalable technical solutions, working across the complete software development lifecycle. - Established maintainable development patterns and reusable components to support the application's continued growth and evolution.	
	Tech Stack: React, .NET, TypeScript	
Sep 2019 — Sep 2020	Software Engineer, VRKod	Ankara
	- Developed and maintained full-stack web applications using Node.js, React, and Next.js, focusing on performance, scalability, and maintainability. - Collaborated with product and design teams to transform requirements and mockups into functional, accessible user experiences. - Conducted code reviews and mentored junior developers, helping improve engineering quality and development practices across the team. - Participated in Agile development processes, including sprint planning, estimation, reviews, and retrospectives.	
	Tech Stack: Node.js, React, Next.js, JavaScript	
STARTUP	Founder & Software Engineer	ActionFlows AI
	Founded and built ActionFlows AI, a no-code AI workflow automation platform designed to make it easier for individuals and teams to create, connect, and deploy intelligent workflows across AI models and external services. Owned the product and engineering lifecycle end-to-end, from initial concept and system architecture to frontend, backend, database design, infrastructure, and production delivery. Built a visual workflow builder for orchestrating multi-step AI processes with support for LLMs, third-party APIs, integrations, scheduling, triggers, and reusable workflow components. Developed the underlying workflow execution and API infrastructure to support automated, event-driven, scheduled, and externally triggered workflows. Designed the platform around scalable SaaS architecture while continuously exploring new capabilities across AI orchestration, automation, and agentic workflows.	
INTERNSHIPS		
Aug 2015 — Oct 2015	Software Engineer Summer Intern, Microsoft	Istanbul
	- Developed software solutions using .NET technologies while contributing to engineering tasks within a collaborative development environment. - Worked with cross-functional teams to implement, test, debug, and troubleshoot application functionality. - Applied software engineering best practices while gaining hands-on experience with professional development workflows and large-scale engineering standards.	
	Tech Stack: .NET	
EDUCATION		
Jan 2010 — Jan 2019	Computer Engineering, Middle East Technical University	
LANGUAGES	Turkish	English

OPEN SOURCE

2024

Startbase

Open Source React
Ecosystem

Creator and maintainer of open-source React and TypeScript libraries focused on reusable UI components, accessibility, forms, modal management, and privacy-compliant consent management.

Projects: Start UI · React Modal · React Form Elements · React Consent Manager

Tech Stack: React, TypeScript, Next.js

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS

Frontend: React, Next.js, Vue, Redux

Backend: Node.js, REST APIs

Data: PostgreSQL, Prisma

Architecture: Full-Stack Development, SaaS, Multi-Tenant Architecture, RBAC, Real-Time Systems, Background Workflows

Tools & Platforms: Git, Inngest, PostHog
